Seal Repair***

Durametallic CDPS10-8.500

Each seal repair begins with a thorough cleaning, inspection and evaluation. We don't just replace parts, but analyze ways to improve the life of the seal. In the case of this Durametallic seal, we added hardened spray to the high wear surfaces of the seal sleeve. We replaced the tungsten carbide faces and lapped to one light band. We also installed newly designed assembly clips and tested the seal before shipping.

Alignment Clips Bolted to Seal

Repaired Durametallic Double Cartridge Seal for A Hymac Screw Impregnator

Carbon Bushing inserted on end of Seal
